

## Scraper Kings Shopify Scraper Instructions

First off, we would like to thank you for purchasing our shopify scraper! We hope you guys have great success with it. We put in a ton of time to make this the best shopify scraper on the market with all the features people wanted. Anyways let's get into the instructions.

**How to find out if a site is shopify based:** To find out if a website is Shopify based site, go to the home page of the site you want to check and add: /sitemap\_products\_1.xml ...and hit enter. If it is Shopify, a page like this will appear.

```
← → ↻ ⓘ oneness287.com/sitemap_products_1.xml
This XML file does not appear to have any style information associated with it. The document tree is shown below.
▼<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9" xmlns:image="http://www.google.com/schemas/sitemap-image/1.1">

```

If a page like this does not appear, then it is not a shopify based site.

To use this scraper you must input the sitemap .xml page link for the Shopify site(s) you want to scrape. To see an example of this page, go to any of the links included in the "ScraperLinks" txt file that was included.

You can scrape **EITHER** a list of sites or a single site. A list of 50+ Shopify sites in the correct link format came with the scraper this is the "ScraperLinks" file. You can customize this list to your liking, removing sites or adding new links to it when you discover new Shopify sites.

The scraper will also work on any other site that has a sitemap page in the same format. Two examples are Overkill and Afew Store. The links for those sites are included are also included in the "ScraperLinks" txt file.

## SETUP INSTRUCTIONS

First, open the scraper by double-clicking on the Scraper Kings icon and putting in your serial key you received in the email.

**1. Add the link(s) you would like to scrape:** Open the "ScraperLinks" txt file and copy and the site(s) you would like to scrape, and paste them in the "Target Links" section on the scraper and click add. The scraper will scrape all sites you added to the list. To modify the list, just delete links from it or add links to it.

**2. Keywords:** Enter a word or words for the item(s) you are scraping for. Multiple keywords are supported in this format: a ; (without spaces) acts as 'or' and/or a plus sign acts as 'and.' For example:

jordan,nmd+primeknit,nmd+pk,yeezy,adidas+ultra+boost

here you are asking the results to include the word jordan or both words nmd and primeknit or both words nmd and pk or the word yeezy or both words ultra and boost. All links found that match these keywords will be output.

**3. Date:** This is a highly-recommended filter as the scraper will only return product links that were last modified on a specific date. You usually want to use the current date here. If you leave the keyword filter blank it will return all product links that have been uploaded or modified on the date you set.

The date **MUST** be in this format: dd/mm/yyyy (for example it would be 30/01/2017)

**NOTE:** Shopify websites are updated via the Universal Coordinated Time(UTC), therefore, if you follow the east coast time zone, 7Pm December 1, 2016 is considered 12 Am December 2, 2016 in UTC format

**4. Schedule Delay:** This setting is required. This is how long the scraper will wait between scrapes. We recommend using a 2 minute delay if scraping more than 10 sites at a time, if you would like to use a smaller delay, run multiple instances of the scraper and run 5 sites per instance.

**5. Twitter Notification:** *\*THIS IS AN OPTIONAL FEATURE AND DOES NOT NEED TO BE SETUP UNLESS YOU WANT TWITTER NOTIFICATIONS\**

This feature will auto tweet new found links to the twitter account of your choice

Video on how to set up twitter notifications:

<https://www.youtube.com/watch?v=u9IMn-z6T2I>

**After everything above is done, you can go ahead and run the scraper**

**6. Output:** All new links will go here, just double click on them and it will automatically open in your browser for easy checkout. It will also show you the keywords/date you used. You can also click “program” at the top left and clear this when its get filled up.

## FAQ's

**What to do with a zip file?:** Right-click and select Extract, a new folder will appear in the same directory with the files that you can open

**Can't paste the license key into the activation field?:** You must use the keyboard command for that, Control+v

**Can i switch computers after activating?:** Yes, just click “program” and then “deactivate” inside the scraper, and you are free to activate it on another computer.

**Can i let the scraper run 24/7?:** Yes you can, if you plan to let it run 24/7 we recommend you have the scraper setup on a server.

**Can i run multiple instances of the scraper?:** Yupp! Just open another instance.

**Again, thanks for buying! If you have any other questions or need help, message us on twitter @ScraperKings**
